

EXTENSION CABLES- HOW TO DETERMINE IF YOU NEED 4 PIN OR 2-2 PIN PLUGS

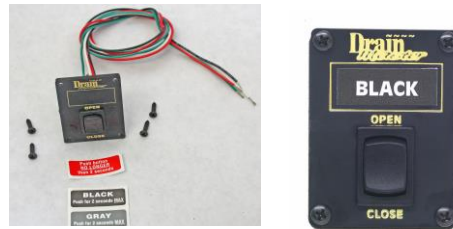

Extension cables for Drain Master electric valves come with electrical plugs in two versions. **If you are ordering valves and cables that will be used together on a new install you will choose PN TYPE- 4 PIN** There is no need to read any further.

If, however you are adding or replacing a switch or extension cable, the type of plug on the end, needs to match up properly. To determine this, simply follow the wires from the back of your operator switch. They will be approximately 12 inches long. You will find either one plug (pic A) or two small plugs (pic B)

Your operator switch should look like this

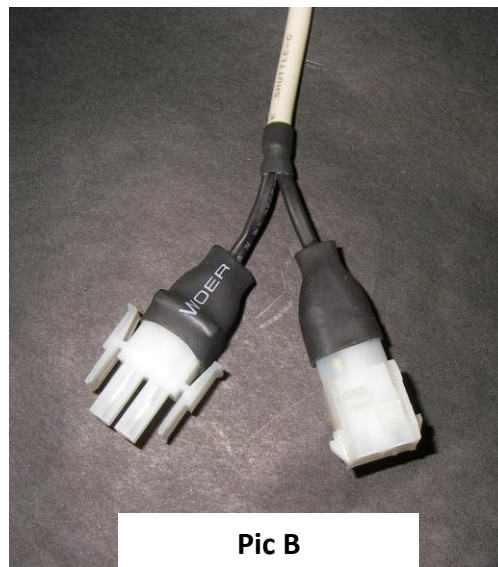

If your switch looks like this, (no red light) extension cables are not an option

4 PIN PLUG

TWO 2 PIN PLUGS

At the end of the wires, you will either find a plug(s) that will plug into the receptacle in picture A, picture B or it may be hard wired.

If your plug looks like Pic A, choose Pin Type- 4 PIN from the drop down.

If your plug looks like Pic B, choose Pin Type- 2-2 PIN
